**Access and Use:** The Otis Historical Archives is committed to providing open access to its collections as far as possible within the limits of privacy and confidentiality. Some of the records may contain restricted material. Access to this collection is at the discretion of the Otis Historical Archives and material contained within the records may be subject to review before access is granted.

**Series/Scope and Content Note:** This collection consists of various publications by the Museum or Museum staff, including the *Catalogue of the United States Army Medical Museum* (Surgical, Medical and Microscopical Sections), *The Medical and Surgical History of the War of the Rebellion*, Surgeon General's Office circulars, late 19<sup>th</sup>-century and early 20<sup>th</sup>-century reports by Walter Reed and others on typhoid fever, cholera, yellow fever, general hygiene, and sanitation in the military, and publications that use resources available at the Museum. The collection also includes preliminary drafts of the Museum's earliest publications, with extensive handwritten notes for revisions, additions, etc. Working copies of the *Catalogue of the United States Army Medical Museum* and *The Medical and Surgical History of the War of the Rebellion* are stored with some of the miscellaneous publications in Building 2500, Collection Room 1013, Row 7, Column 1.

#### **SERIES 001: CATALOGUES OF THE ARMY MEDICAL MUSEUM**

The Army Medical Museum published its first catalogue in 1863. At that time, Curator John H. Brinton reported the collection consisted of 1,349 objects (985 surgical specimens, 106 medical specimens, and 133 missiles). The 58-page 1863 Catalogue listed a Museum number for each object, along with a brief description and name of the contributing medical officer. By 1867, the Catalogue had been divided into three sections: Surgical (which listed nearly 5,000 specimens and reached 664 pages), Medical (nearly 900 specimens, over 136 pages), and Microscopical (more than 2,000 specimens, over 161 pages). This

series includes multiple editions of the catalogue as well as other publications derived from the information contained therein. This series includes Boxes 001-018.

### **SERIES 002: MEDICAL AND SURGICAL HISTORIES OF THE WAR OF REBELLION**

*The Medical and Surgical History of the War of the Rebellion (MSHWR)* was published between 1870 and 1888 (later editions were titled *The Medical and Surgical History of the Civil War*). Surgeon General William Hammond assigned curators Dr. John Hill Brinton and Dr. Joseph Janvier Woodward to research and write the Surgical (injuries) and Medical (diseases) sections, respectively. *MSHWR* was announced to the Army Medical Department on 9 June 1862 and *Circular No. 5* requested cases and patient data from medical officers. Compiling and publishing the massive volumes of the *MSHWR* was an integral part of the Museum operation and took 23 years to complete. Each of the six “parts” of the two “volumes” averaged nearly 1,000 quarto pages of text, with an average of some 40 full-page plates made mostly from illustrations, many in color, plus scores of black and white wood cuts. In 1870, the first Medical and Surgical volumes were completed, with Woodward's Medical section designated Part I, Volume I. George A. Otis replaced Brinton after just two years and his Surgical section became Part II, Volume I. Otis arranged his portion of *MSHWR* by methodically examining the wounds of the body from head to foot and then discussing surgical treatments, such as amputation. The second Surgical volume came out in 1876, followed by the second Medical volume in 1879. Both volumes were heavily illustrated with engravings, lithographs and photomechanical prints based on photographs. Otis devoted 17 years to *MSHWR*, and upon his death in 1881 his work was completed by Dr. David L. Huntington, who scrupulously adhered to Otis’ plans that the final Surgical volume would include the legs and feet. Woodward died in August 1884 and was succeeded by Charles Smart, who also adhered to his predecessor’s original plan, following up the second Medical volume that focused exclusively on dysentery and diarrhea with a third that focused on common diseases and especially fevers such as malaria, typhoid, smallpox, and yellow fever. The third Surgical volume was completed in 1883 and the third Medical volume was published in 1888. This series includes multiple issues of each volume, including some versions with inscriptions, notes, and marginalia. This series includes Boxes 019-022.

### **SERIES 003: SURGEON GENERAL’S OFFICE CIRCULARS**

The circulars in this series employed the information collected by the Army Medical Museum and furthered the role of the Surgeon General’s Office as a repository of information and educational arm of the federal government. The series includes reports on cholera, yellow fever, and general hygiene in the U.S. Army; reports on important developments in the treatment of injuries to the femur from gunshot wounds, hip-joint surgeries, and other general surgical developments during the Civil War; and a report on the construction of post hospitals following the war. This series includes Boxes 023-025.

## SERIES 004: MISC. PUBLICATIONS

This series includes additional reports on disease and hygiene in the U.S. Army, a list of skeletons and crania used during the International Exhibition of 1876, information about the Museum’s Billings Microscope Collection, general histories of the Museum, and contracted studies of the Museum, its holdings, and its operation. Lastly, this series also includes recent publications by Museum staff, which incorporate materials that are part of the Museum’s collections. This series includes Boxes 026-028.
